Rush Gold Corp. to Initiate Fieldwork and High-Resolution WorldView-3 Satellite Alteration Image Acquisition at Skylight and Legal Tender Properties

VANCOUVER, BC, November 10, 2025 – Rush Gold Corp. (“Rush” or the “Company”) (CSE: RGN | FSE: B6H) is pleased to announce plans to commence initial reconnaissance field investigations at the recently optioned Legal Tender and Skylight properties. The Legal Tender Property is located 5 kilometres north of Rush Golds’ Skylight Property, both located approximately 60 kilometers northwest of Tonopah, NV within the Royston Hills Republic Mining District, Nye County.

In the coming weeks the Company expects to initiate field rock sampling and geological reconnaissance investigations designed to follow up on recently announced Advanced Spaceborne Thermal Emission and Reflection Radiometer (“ASTER”) anomalies that are interpreted to represent the alteration footprint of a low sulphidation gold-silver epithermal system (*see Rush Gold Corp.’s news release dated September 18, 2025*).

In addition, Rush has commissioned the new acquisition of high-resolution WorldView-3 (WV-3) satellite alteration mapping imagery. The WV-3 satellite offers vastly improved resolution in comparison to ASTER with a visible near infrared (VNIR) sensor resolution of 1.24 metres and short-wave infrared (SWIR) sensor resolution of 3.7 metres, versus 15 metre and 30 metre ASTER resolution. The WV-3 satellite launched in 2014 employs 16 spectral bands capturing 8 VNIR and 8 SWIR bands capable of generating alteration intensity maps for a suite of 13 key alteration minerals: including alunite, buddingtonite, montmorillonite, sericite, iron oxide and silica.

Within the Skylight and Legal Tender properties, the WV-3 satellite data will enable effectively outcrop-scale alteration mapping enabling geologic teams to rapidly assess high-priority areas for ground follow-up, aided by known locations of silver geochemical anomalies, historic mining pits and shafts.

"Given the positive results received from our Skylight Property ASTER alteration study conducted at relatively coarse resolution we decided to leverage the much higher outcrop-scale resolution permitted using the WV-3 platform, and to expand coverage to the recently acquired Legal Tender claims as well.", says Anthony Zelen, CEO of Rush Gold, he continues, "We look forward to commencing our first field program at Skylight and Legal Tender with the intention of advancing priority targets to drilling stage."

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by Kristopher J. Raffle, P.Geo. (BC), Principal and Consultant of APEX Geoscience Ltd. of Edmonton, AB, who is a director of Rush Gold Corp. and a "Qualified Person" as defined in National Instrument 43-101 – Standards of Disclosure for Mineral Projects. Mr. Raffle has verified the data, which included a review of the sampling, analytical and test methods underlying the data, information and opinions disclosed herein.

About Rush Gold Corp.

Rush Gold is a Canadian mining exploration company focused on advancing its Skylight gold property, located in the Republic Mining District, Nye County, Nevada, in the USA.
